Sojitz Corporation

Sojitz Receives Order for Track Installation and Delivery of Integrated Railway System as Part of Extension Project on the Jakarta MRT North–South Line

Sojitz Corporation (“Sojitz”) has concluded a contract with PT Mass Rapid Transit Jakarta (“PT MRT Jakarta”), an enterprise with capital contribution from the Jakarta provincial government, for track installation and delivery of an integrated railway system as part of an extension project on the North–South Line of the Jakarta Mass Rapid Transit (“Jakarta MRT”) subway system in Jakarta, Indonesia. The contract totaling approximately JPY 45 billion was concluded on April 17, 2024.

PT MRT Jakarta is currently carrying out an extension project that will add roughly 5.8 kilometers of track to connect Bundaran HI Station to Kota Station in central Jakarta. Under the contract, Sojitz will undertake the engineering, procurement, and installation of overhead contact systems, platform screen doors, and trackwork, as well as power distribution, signaling, and communications systems.

Indonesia has experienced rapid economic growth in recent years, and chronic traffic congestion and consequent air pollution have become critical issues in the nation’s capital of Jakarta. The project for the construction of the Jakarta MRT is supported by the Japanese government via a yen-based ODA loan provided through the Japan International Cooperation Agency (JICA) under its Special Terms for Economic Partnership (STEP) program. The Jakarta MRT’s North–South Line commenced operations as Indonesia’s first underground subway system in April 2019, and plans are currently in place for both the extension of the North–South Line as well as the construction of a new East–West subway line.

Sojitz will continue to actively pursue transit infrastructure projects and related business in Indonesia in order to support sustainable local economic and societal development to contribute to global decarbonization efforts.
